

This is proving to be a very popular piece of equipment. It is substantially built, mobile and won't sway about when you are carrying out fine precision work.

Light Box Table with its height adjustment crank extended for use.

Unlike many other light boxes with acrylic surfaces, ours are always fitted with a durable toughened glass work top over a super-bright light source.

The fully dimmable LED lighting has low energy consumption, a very low heat output and an average life of between 25,000 and 50,000 hours usage. Colour temperature is approximately 6,500 Kelvin.

- Designed and made specifically for conservation, but equally at home in the graphic design studio.
- High quality materials and innovative, elegant design
- Hand made in our own workshops

The table top has a sustainably sourced hardwood frame, with a sheet of toughened opalescent glass, flush fitted and sealed against dust and moisture. The U.K. made illumination panel has a computer designed and etched surface preparation to eliminate vignetting and is optimised to the dimensions of each individual table.

The Light-Box is mounted on a fully welded, powder coated steel frame with heavy duty, fully lockable castors. Manual height adjustment provides a range of 200mm simultaneously to all four legs. A fixed height version is also available.

### Simple to use:

- Switch the mains outlet off
- Connect the Light box to the mains outlet.
- Switch the mains outlet on to illuminate the work surface.
- Turn the control dial to adjust illumination to the required level.

## Height Adjustment:

- Extend the crank handle and rotate it to place the worktop at a comfortable and ergonomic working height. Clockwise for up, anti-clockwise for down.
- Adjustment is continuous (stepless) for precision control.
- When not using the crank, fold it out of the way below the table.

Table with legs at full extension

The standard range of adjustment is 200 mm (approximately 8 inches). Other ranges may be available. Electrically powered height adjustment is optional.

## Optional Table Tilt

- Proven lifting system provides smooth, variable and safe adjustment
- Fine adjustment of angle for work & display
